ADAPTATION NOTES

Online vs. in-person format notes for every activity that changes shape

A Citrus Edition Facilitator Resource • Companion to the FIRSTS Manual

Stage Eleven • Tools & Technology

PURPOSE

Stage Eleven is unusual in that most of its activities are inherently screen-based already, which actually makes online facilitation more natural here than in most other stages — participants are already looking at a device either way. The real format challenge is visibility: can a facilitator or peer actually see what's on someone else's screen when it matters.

This document covers every activity across Stage Eleven's Session Plan and Group Versions of Key Exercises documents that genuinely changes shape between formats, with specific attention to screen-sharing needs online.

Format Notes by Activity

Activity	In-Person	Online
Category Relay (FIRST O1, from Group Versions doc)	Small groups physically rotate to different tables, each with a posted category list.	Breakout rooms of 3-4, with a shared doc per category (one tab or section each) that groups rotate through by switching which section they're editing.
Hands-on tool practice (O3-O9, O13, O16-O24)	Participants work on personal laptops; facilitator circulates the room for individual troubleshooting.	Share screen briefly to demo exact steps before independent work. Keep a co-facilitator available via chat continuously for troubleshooting, since remote participants can't just raise a hand for a passerby.
Function Swap Challenge (FIRST O5)	Pairs sit side by side, screens visible to both.	Breakout rooms of 2, with screen-share enabled so each partner can actually see the other's spreadsheet while teaching.
Pair Programming Lite (FIRST O16)	Partners sit side by side; the newer partner types on their own laptop while the experienced partner watches and narrates.	Breakout rooms of 2 with screen-share. The experienced partner narrates via audio while watching the newer partner's shared screen, rather than taking over control remotely.
Prompt Battle (FIRST O17)	Small groups cluster around shared devices or compare printed/shared outputs.	Breakout rooms of 3-4, pasting each person's AI output into a shared doc for side-by-side comparison rather than reading them aloud.
Debate Round (FIRST O25)	Groups split physically into two sides facing each other.	Breakout rooms split into two smaller sub-groups (if the platform supports nested breakouts) or two full separate rooms that reconvene for the actual debate in the main room.
Full-group share-outs / closing rounds	Genuine round-robin around the room.	Use "raise hand" or call names directly from a list rather than open-floor, which tends to stall on video.

GENERAL HYBRID GUIDANCE

For any activity involving watching someone else's screen (the Function Swap Challenge, Pair Programming Lite), a hybrid session should never pair an in-person participant with a remote one — screen visibility works completely differently for each, and the pairing will feel lopsided. Keep pairs same-format.

For technical troubleshooting during hands-on segments, designate a specific channel (a chat thread, a raised-hand queue) for remote participants to signal they're stuck, since they can't just catch a circulating facilitator's eye the way an in-person participant can.
