FIRSTS • Session Debrief / Close-Out Script

Stage Eleven • Tools & Technology

WHY THIS MATTERS

A genuine close-out does three things every time: names what was actually accomplished, connects it forward to what's next, and gives a specific, concrete action to take before the next session. In a hands-on, technical stage like this one, the close-out also plays a real role in reassuring participants that partial or imperfect completion of a technical exercise is still genuine progress.

Close-Out Scripts

SESSION 1

Closing Session 1

"Today was about the tools most of us touch daily: office software, spreadsheets, presentations, collaboration platforms, project management, documentation, and note-taking."

"The common thread today was genuine fluency, not just familiarity. Knowing a tool exists and knowing how to actually use its real capability are two different things, and today closed some of that gap."

"Before next time: create a free GitHub account if you don't have one, and make sure you have access to at least one AI tool."

SESSION 2

Closing Session 2

"Today moved from familiar tools into personal systems and newer technical territory: your calendar, tasks, and files, then version control, Git, AI, visualization, and databases."

"If some of today felt genuinely unfamiliar or intimidating, that's expected — we covered real technical ground most people haven't touched before. The goal was exposure, not expertise."

"Before next time: identify one real, repetitive task in your own life that could plausibly be automated."

SESSION 3

Closing Session 3 (Stage Close)

"That's Stage Eleven, complete. We've gone from individual tool fluency, through personal systems, to automation, integration, and finally stepping back to see your whole stack as one coherent system."

"FIRST O30 asked you to be honest about what's no longer earning its place. That kind of periodic audit is worth repeating well beyond this program — tools and needs both keep changing."

"Before we close: name one specific tool you identified today that you're genuinely dropping, not just one you're adding."

"Stage Fourteen picks up with Project Management — it builds directly on the project management tool fluency from FIRST O8 earlier in this stage."
